

Guillaume Bogard

hey@guillaumebogard.dev / +33 6 19 58 32 35 / Paris, FR

I am a senior software engineer with a strong focus on statically-typed languages and functional programming. I've been programming for about 16 years, and professionally so for more than 10 years, on both the back and front ends.

Nowadays, I mostly use Haskell and Typescript professionally, but my experience spans multiple languages including 4 years of commercial Scala, and 2 years of commercial experience with Rust. My achievements include building AI agents and RAG systems for Aletiq, and building a web-scale crawler for Qwant.

Work experience

Senior Software Engineer (Haskell, TypeScript, React)

April 2025 – Present

Aletiq · [haskell](#) · [react](#) · [nix](#)

- Building an AI agent that lets users interact with technical documents (ISO standards, assembly drawings, industrial specs) and PLM data (BOMs, manufacturing orders etc.). This includes a large scale indexer for thousands of customer documents and a comparison system for technical documents.
- Shipping a recommendation system to help find related documents and products, improving traceability across the PLM
- Full-stack development in TypeScript (Effect.ts, React) and Haskell of various PLM features

Senior Software Engineer (Crawler Team)

December 2022 – April 2025

Qwant · [rust](#) · [kubernetes](#) · [python](#)

- Built a high-performance clean content extraction service in Rust, matching or beating industry-standard (Trafalatura) quality of extraction while running orders of magnitude faster
- Architected a sharded, lock-free crawler that dramatically improved crawling throughput while enforcing strict politeness policies
- Worked across the crawler's core: URL redirection, URL filtering, robots.txt enforcement, specialized scrapers and end-to-end testing

Lead Scala developer

October 2019 – December 2022

Canal+ · [kafka](#) · [kubernetes](#) · [scala](#)

- Initially joined as a Scala consultant on MediasHub, a media asset management platform ingesting 300+ hours of content per day
- Then promoted to lead the documentation feature-team where I designed and implemented core services for video annotation and search, using Elasticsearch, PostgreSQL and the Typelevel stack
- Migrated millions of legacy XML documents through a high-throughput Kafka/fs2 pipeline, enabling legacy systems to be shut down
- As lead I also mentored the team in functional programming: Cats Effect, hexagonal architecture and property-based testing (ScalaCheck)

Functional programming tutor

October 2019 – October 2019

École des Hautes Études d'Ingénieur (HEI) · [scala](#)

- Taught a 15-hour functional programming course in Scala to engineering students (referential transparency, totality, laziness, composition, IO monads and functional streams with Cats Effect and fs2)

Scala developer

May 2019 – September 2019

Linkvalue · [Colisweb](#) · [scala](#) · [kubernetes](#)

- Developed Scala microservices in a purely functional style (Cats, Http4s, Tapir)
- Migrated services from Play Framework to the Typelevel stack, unifying libraries and coding style across the codebase
- Built an open-source tracing library (scala-opentracing) that improved the platform's observability
- Deployed services to Kubernetes and mentored an intern in functional programming

Full-stack Javascript developer

January 2019 – May 2019

Linkvalue · Decathlon · [react](#) · [node](#) · [javascript](#)

- Built front-end and back-end features for a sports-places PWA: React/Redux Saga, Node.js/Koa and PostgreSQL
- Introduced end-to-end tests (Cypress), code reviews and pre-commit linting, replacing a push-to-master workflow
- Refactored the codebase and reduced its size by around 30%
- Taught functional programming principles (composition, referential transparency) and introduced Redux Saga to separate business logic from side effects

Front-end developer

June 2018 – January 2019

Linkvalue · Norauto · [react](#) · [vue](#) · [polymer](#) · [javascript](#)

- Built progressive web apps (React, Vue) as part of a full overhaul of Norauto's information system
- Co-built a framework-agnostic design system with custom elements (Polymer), documented and shared company-wide
- Applied a micro-frontend architecture, splitting the domain into independent, loosely coupled applications
- Introduced styled-components, React Context and state-management practices to the team

Front-end developer

January 2018 – June 2018

Linkvalue · Qlikbeton · [react](#) · [javascript](#)

- Built the front end of a multi-country concrete marketplace in React, in a team of four
- Designed a per-country configuration system to override styling and behaviour without duplicating code
- Kept the codebase functional (Ramda, immutable data, isolated side effects) with 100% unit test coverage

Full-Stack developer

November 2016 – December 2017

Pingflow · [vue](#) · [node](#) · [scala](#) · [javascript](#) · [kubernetes](#)

- Led a small team and rewrote Pingview, the company's dashboard SaaS, into a stateless, horizontally scalable architecture
- Migrated the stack from vanilla JavaScript/jQuery to TypeScript and Vue.js
- Introduced Redis caching and pub/sub for live updates (thousands per second), and Scala/Akka to model data flows as actors and messages
- Shipped the app as Docker images on a Rancher cluster

Junior Javascript Developer

May 2016 – November 2016

Docler Holding · [javascript](#) · [node](#)

- Built a SPA (AngularJS) that let marketers manage e-mail campaigns end to end, including a WYSIWYG e-mail designer
- Built an e-mail tracking system measuring opens, click rates and per-recipient interaction heatmaps
- Contributed to the Node.js/StrongLoop back end

Skills

-
- **Programming Languages:** Strong knowledge of Haskell, Scala, Rust and TypeScript with some notions of Java
 - **Libraries and frameworks:** Strong knowledge of the Typelevel stack (Cats, Cats Effect...), significant experience with Effect (TypeScript)
 - **Infrastructure & data:** Nix, Postgres, Kafka
 - **Frontend:** React with Tanstack Query, Vue
 - Significant experience with agentic workflows

Education

-
- **Self-taught engineer:** I learned by building things, reading a lot, and shipping software
 - Programming as a hobby since age 13, and landed my first professional programming job at 18
 - Always driven to learn new languages, paradigms and tools, and to pass that knowledge on through mentoring and teaching
